# Meet Brijjit

hey

hi

Applied immediately upon closure, Brijjit reduces tension to help facilitate better healing.

## Brijjit is special because it

- ☆ Reduces tension during and after wound closure and facilitates support
- ☆ Allows for a wide range of motion and comfortable wear
- ☆ Adheres to skin for up to 2 weeks
- ☆ Can be reapplied routinely for longer-term support

## USES

Brijjit can be used for tension relief to support beautiful healing in a variety of surgical procedures, including the following:

ABDOMINOPLASTY

BIOPSY / SKIN LESION

BODY CONTOURING

BRACHIOPLASTY

BREAST REDUCTION

LACERATION

MASTOPEXY

SCAR REVISION

*If all my patients get these results, I'll be the happiest plastic surgeon you know.*

Dr. Julie Ferraiola, MD  
Plastic Surgeon  
Englewood, New Jersey

# SKIN HEALING IS COMPLICATED

And tension often gets in the way.

Scars can have a profound impact on patients and surgical outcomes.

## HEALING

Let's face it, healing in general, and healing of the skin in particular, is complex. A number of factors can contribute to less than perfect results:

### PATIENT FACTORS

Readily identified differences in genetics, ethnicity, age, and anatomical location can all affect healing outcomes.

### MECHANICAL FORCES

Mechanical forces—**primarily tension**—also play a significant part in scar appearance.

## Applying Brijjit

Enclosed in each box is a Brijjit applicator and 6 Brijjit devices.

In just 3 simple steps, Brijjit is applied:

STEP 1: LOAD

STEP 2: APPLY

STEP 3: RELEASE

“

As a plastic surgeon I was frustrated that no matter how well I closed the wound, some incisions scarred while others healed seamlessly.

After years of research and multiple iterations, Brijjit was born—an easy to use device for wound closure and support that reduces the tension that leads to scarring.
